

Swimming Pool and Spa Pool Care

Whilst the standard NZS 5826 only covers public swimming and spa pools, the water quality tests also serve as a useful guideline for private pool owners.

Tests include pH, Total Dissolved Solids (TDS) and Total Chlorine.

To ensure the quality of the water in your swimming and/or spa pool RF Test Solutions recommend the Extech EC510 Kit. This allows you to check the pH balance (acidity/alkalinity), the TDS/Conductivity (water hardness), Salinity (the dissolved salt content of the water) and the temperature. If you use chlorine in your pool then we also recommend monitoring the levels with the Extech CL200 Chlorine Meter.

Please note RF Test Solutions have several different models of water quality measurement instrumentation, so please let us know if you have specific requirements to meet.
